Letter of Commendation to Innoventor, Inc.
From Honeywell FM&T
Weld Engineering Department

Sam Hammond,

I am writing to you to commend your team members, Rob Humfeld and Jonathan Olson. They did an excellent job rewriting major portions of our National Instruments LabVIEW real time code used to control a million dollar 60 kV electron beam welder. The existing code had major performance issues with the vacuum, motion and weld control screens. Honeywell FM&T needed to get this piece of weld equipment up and qualified for production within four months.

The project was completed on time in January 2007 and exceeded our expectations with respect to performance and ease of use. Rob's dedication went above and beyond what was expected in order to meet our important deadline. Not only did Rob work several long 14 hour days, but he also drove two hours home and returned the next day to do it all over again. He came up with innovative solutions to numerous challenges throughout this project and maintained a very friendly and professional disposition.

Thank you again and please express our gratitude to all of those employees of Innoventor who had a hand in the success of this project. I look forward to working with your company again on future projects and would highly recommend your company to others.

Sincerely,

James P Dereskiewicz

Jim Dereskiewicz
Principal Weld Engineer

JPD
